How many bushels per acre is typical?

For Iowa in 2025, a typical corn yield is about **210–225 bushels per acre**, with statewide averages reported at 219 bushels per acre and recent field estimates ranging from roughly 202 to 240 bushels per acre depending on local conditions.[1] [2] [3] [4] [5]

Typical Yield in Iowa

- **Statewide average 2025:** ~219 bushels per acre[2] [3] [1]
- **Typical range recent years:** 202–240 bushels per acre[4] [5]
- **US national average:** ~179 bushels per acre (lower than Iowa's yield)[6] [7]

Yield Variability

- Top-performing Iowa fields sometimes exceed 240 bushels per acre in optimal conditions.[5] [2]
- Unusually wet or dry years, disease, or suboptimal management may lead to yields below 200 bushels per acre, but these are less common in modern Iowa production.[8] [4]

Farmers in Iowa should expect typical yields of approximately **210–225 bushels per acre**, though highly productive fields can exceed these averages in favorable years.[3] [1] [2] [4] [5]
